HP Envy 4520 Not Printing in Color? Issue Resolved

HP Envy 4520 Not Printing in Color

While the HP 4520 is the printer envy, among other HP printers, they are praised for their impeccable quality and ease of use, some technical issues do arise from time to time.

Are you having trouble with your HP Envy not printing in color? Are you able to get a black-and-white print but no color copies? nothing to worry about. This article will tell you the possible causes and solutions for this problem.

Why is my HP Envy 4520 not printing in color?

If you are using an HP Envy 4520 Printer or 4500 printer series and it won't print in color with your Windows, then there are three possible reasons behind this problem. Check all of these reasons before you proceed further with troubleshooting your HP Envy 4520 printer.

Printhead not cleaned properly:- If you are using your HP Envy 4520 printer for a quite long time and have not cleaned the printhead then HP 4520 will not print in color. It's recommended to clean the printhead manually with the help of tissue paper or you can use the HP utility available on the HP Envy printer itself. That will fix the problem in one go.

Color Printing feature is not enabled:- Sometimes it happens when you try to print a color document it comes out Black and white. It's due to the color feature on HP Envy 4520 printer. If the color feature is Disabled in printer properties then also Envy 4520 will not print in color. So Enable the Color printing feature in HP printer properties to start printing in color. Hopefully, this will fix the issue.

Driver Conflicts:- If you have used any HP printer earlier on the same computer or installed more than two printers, then there might be a driver conflict. To fix this, uninstalled the HP 4520 drivers completely and re-installed in again from the HP website itself.

Steps to Fix HP Envy 4520 won't print in color

- These troubleshooting steps are for Windows 10 users who are facing problems with printing in color from HP Envy 4520 printer.

- Firstly **Delete** or **Remove** HP Envy 4520 Printer from **Devices**.

- Now **Uninstall HP Envy 4520 printer drivers** completely from the control panel of your Windows 10.

- Next Press "**Windows Key + R**" on the keyboard and open **Run.**

- Type this **printui.exe /s** in the **Run** box and click **OK**.

- Select the **Drivers** tab to open it.

- Under **Drivers**, if you find any HP Printer drivers, please **Delete** them and press OK.

- Now again go to **Control panel** > **Devices and printers** > **Add a printer.**

- In **Choose a device or Printer** pop up**,** click on "**The printer I want isn't listed**".

- Choose the option **Add a printer using a TCP/IP address.**

- Enter the **IP Address** of your HP Envy 4520 Printer here (192.168.0.5 or 10.0.0.45) and hit **Next**.

- This will install the HP Envy 4520 printer with basic drivers which will help you to print in color also.

- Try printing in color with HP Envy 4520 printer.

- **Note:-** In most cases, this will fix HP Envy 4520 won't print in the color issue. However in case if it doesn't fix please contact HP Printer Support to service your Printer.
